

AIRLINE DATA ANALYST

JPOM Canada has a requirement for an Airline Data Analyst Consultant with the skills and experience, to undertake the responsibilities, outlined below.

Responsibilities:

- Identify and assess opportunities for new product development.
- Create business case analyses for use in various funding initiatives (e.g. government grants)
- Complete market assessment/business intelligence projects.
- Provide technical and Subject Matter Expert (SME) support, including end-customer sales support.
- Product SME support in the areas of dispatch, flight planning, fuel savings and aircraft performance.
- Support data integration and deployment plans. Help bridge the gap between concept and realizing how to integrate products/services into airline operations.

The successful candidate will provide consulting services to Clients in Alberta and other regions of Canada.

Assets:

- 10 years+ experience working with airlines and/or airline service providers.
- Experience in dispatch with a track record of increasing responsibilities.
- Experience dealing with Irregular Operations.
- Understanding of fuel burns and opportunities for operational optimization.
- Ability to work with clients to help them assess and solve problems.

Anticipated Start Date: 01 October 2021

Compensation: Commensurate with qualifications and experience.

Resume's / CV's should be submitted, by no later than 23 August 2021, to:

Larry B. Glenesk
